

The Turán Problem for some unicyclic graphs

Kamil Powroźnik

(joint work with Halina Bielak)

Institute of Mathematics, UMCS, Lublin, Poland

We present some results for Turán problem for some unicyclic graphs composed of the triangle K_3 and trees added to vertices from $V(K_3)$. In this way we extend some results of P. Csikvári and Z. L. Nagy presented in [1] and [2].
